THE ABANDONED ILLNESS
A report by the Schizophrenia Commission

We revealed a dysfunctional system that does not deliver the quality of treatment needed for recovery. Is this tolerable in the 21st century?

American psychiatry in the new millennium: a critical appraisal

Andrew Scull
Sociology and Science Studies, University of California, San Diego, USA

Abstract
This article offers a critical view over the development of American psychiatry from 1980 to the present. It notes the rapid decline of psychopharmacology that followed the publication of DSM-III, the introduction of the concept of 'diagnostic validity', the rise of the pharmaceutical industry and the collapse of public psychiatry that accompanied deinstitutionalization. It argues that while progress and innovation have made scientific progress, the idealistic idea of human
